

Parsing production pedcal data

Igor Mandrichenko

12/9/2010

parsePedestalFile script

- Uses IOVAPI presented earlier
- Parses one or more file
- Usage:

```
Python parsePedestalFile.py
    -f pedcal                # folder name
    -d "dbname=iops"         # how to connect to DB
    -c                       # re-create folder
    51/*.dat 52/*.dat        # files to parse
```

- Timing
 - Single instance: 11 to 16 seconds per file
 - 3 in parallel: 25 to 30 seconds per file
- So far stored data from ../00/00/25/50, 51 and 52 folders
- We are running out of space on our development DB server
